Power

- Monitoring solutions
- CHD – Carrier Help Desk

Monitoring

- Meet Me Room with multiple carrier connectivity
- Meet Me Rack
- Virtual Interconnect
- Internet Access
- Redundant Routers & Switches (Core , Distribution & Access)

Connectivity

- Fire Detection
- ISO Certified
- Guards with CCTV Monitoring 24x7
- Card Key Access Control

Security

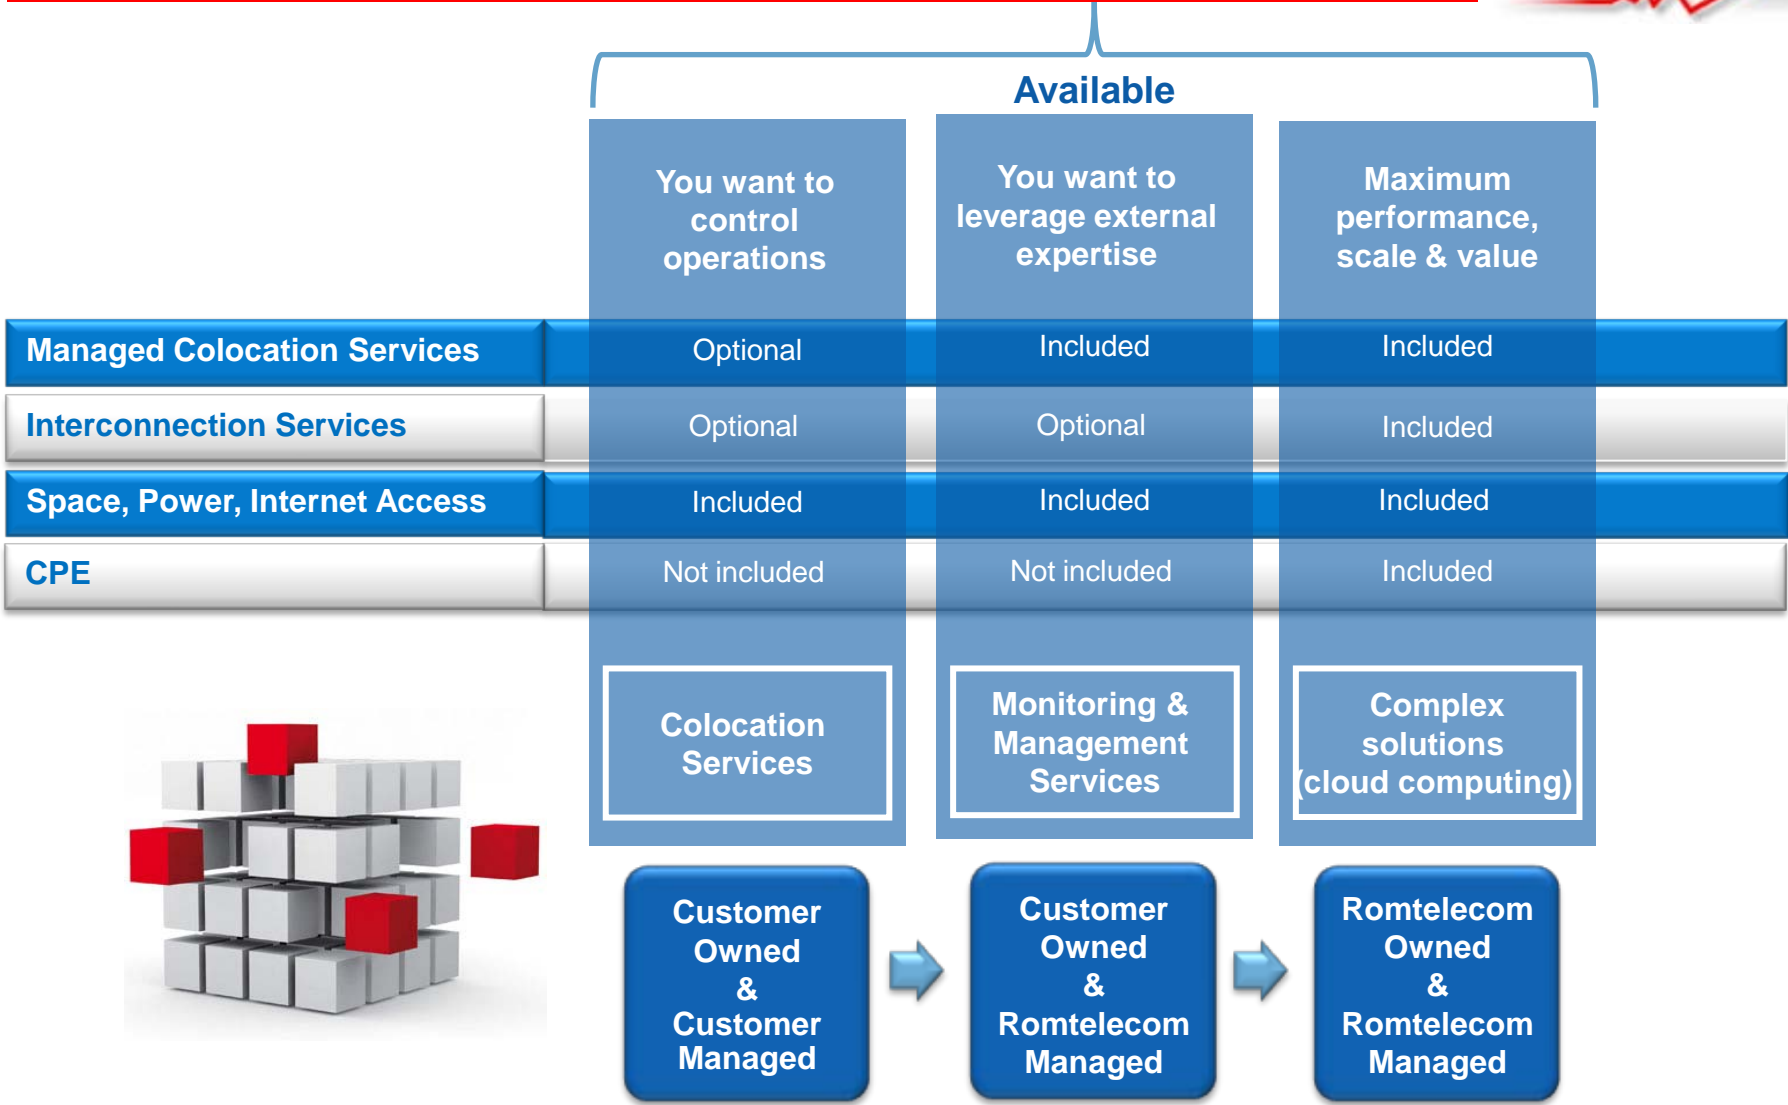

24 x 7 Support
We mean it

100% Uptime

Flexible Service Model

Managed Colocation Services offer facilities with high availability, reliable & secure physical infrastructure including power, cooling, state-of-the-art fire detection & suppression systems and environmental controls.

Benefits

- Access to local, domestic and international telecom infrastructure to serve your connectivity needs
- Low latency content distribution

Features

- Multiple Service Options – Rack Units, Racks, Cabinets, Private Cages
- Flexible Power Options - AC/ DC, Single Phase Power etc.
- Fire Detection
- Optional Value Added Services
- High Uptime

Support Services

"Engineering services" – solution design and optimization, configurations, monitoring services.

"On-site interventions" – all operations requiring personnel displacement.

"Remote hands" – simple activities provided during business hours, such as activating the reset key or switching on and off the hardware located within Romtelecom PoPs, supervised by qualified personnel.

The Colocation Services consist in a range of products developed for domestic and international telecom services operators, offering a neutral infrastructure that provides uninterrupted power in a secure and climate-controlled environment, combined with numerous connectivity options and 24x7 first level support for customers housing needs.

Colocation space:

- Shared space
- Rack space hosting

Meet Me Rack services:

Provide direct interconnection between two customers equipment housed in the same NCC, using the passive network infrastructure elements (cable, ODF/DDF).

- Meet Me Rack
- Extended Meet Me Rack

Virtual Interconnect services:

Provide point-to-point/point-to-multipoint connectivity between customers located in different collocation centers, using active equipment from Romtelecom network for the cross-connect function.

- Virtual Meet Me Room
- Virtual Meet Me Rack

The perfect solution for smaller hosting infrastructure colocation requirements: space in 1/2 cabinet and rack unit increments. A minimum colocation requirement provides space and flexibility for further growth.

Features

- ▶ Internet Acces 10 Mbps Global
- ▶ Secured Access
- ▶ On Site UPS & Generator
- ▶ Guaranteed Space for Expansion
- ▶ 24 x 7 Technical Support

Power

- Dual independent power feeds, backed up by dual battery string Uninterrupted Power Supplies (UPS) systems (deployed as standard)
- Onsite generators - protect services from any single power failure

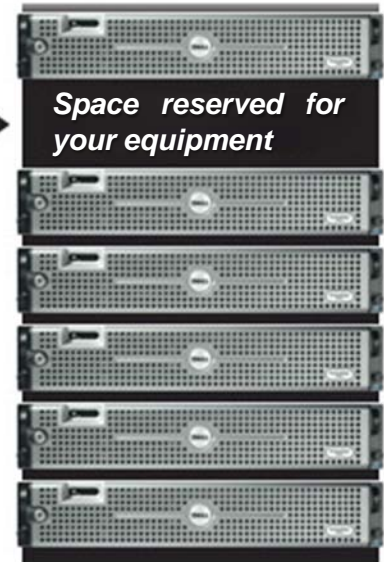

Maximum Security

- 24x7 Manned Security & Monitoring
